

Workshop on LHC activities in Switzerland
28/29 July 2011, Physik-Institut, Universität Zürich-Irchel (Room 16 G 15)

The Physik-Institut of the University of Zurich-Irchel hosts the Workshop on LHC activities in Switzerland, organised by CHIPP and the 'Swiss Centre for Advanced Studies in Particle Physics in the LHC Era'. The purpose of this Workshop is to bring together the achievements of the PostDocs working for and funded by the 'Centre' as well as the ProDoc students associated with the 'Centre's' work and funded by the ProDoc graduate school. After 2/3 of the period covered by the SUK funds have elapsed and at a moment when a new request to SUK for the period 2013-2016 is prepared, it seems the right time take stock of the achievements and results of the people involved. They will focus on their own contributions covering detector operation, maintenance and performance, analysis achievements and computing service experience. The detailed programme for the event can be found [here](#).

This will be a "regional" workshop, therefore the presenters will be allowed to show their own work also in case it is an "unofficial result" as defined in detail by the experiment collaborations.
